

TYSON JIANG

Ottawa, ON | +1 647-960-3999 | tysonjiang@cmail.carleton.ca

linkedin.com/in/tysonjiang | behance.net/gallery/241614847/Industrial-Design-Portfolio-2026

Available for co-op/internship terms of 4–16 months between January 2027 and August 2028 (part-time January–April 2027; full-time from May 2027)

EDUCATION

Carleton University, Ottawa, ON

September 2024 – Present

Bachelor of Industrial Design, Co-op Option; Minor in Business (Entrepreneurship)

Expected Graduation: April 2029

CGPA: 10.65/12.00 (A–)

- Dean's Honour List, 2024–2025 and 2025–2026
- School of Industrial Design Award of Excellence, 2024–2025
- Relevant Coursework: Design Studio, Human Factors and Ergonomics, Materials and Manufacturing Processes, Design Research Methods, Technical Drawing, Entrepreneurship

TECHNICAL SKILLS

CAD and Engineering: SolidWorks, Onshape (sheet metal, assemblies, technical drawings), AutoCAD, SketchUp, GD&T fundamentals, tolerance analysis, bill of materials (BOM) development, design for manufacturing (DFM)

Visualization and Rendering: Blender, Vizcom (AI-assisted concept and CMF exploration), Raylectron, Adobe Photoshop, Adobe Lightroom, product and event photography

Graphics and Communication: Adobe Illustrator, Adobe InDesign, Canva, brand identity systems, typography, presentation boards, technical documentation

Prototyping and Fabrication: FDM 3D printing (Bambu Studio), industrial design clay modelling, sheet-metal forming and torch annealing, thermoforming, foam and cardboard sketch modelling, jig and fixture design, bandsaw, grinder, thread tapping, hand and power tools, skid-steer (Bobcat) operation

Design Methods: User-centered design, usability testing, design research, concept development, rapid prototyping, iterative design, ergonomics, persona and use-case development, CMF

Other: Next.js, React, Git/GitHub, Microsoft Office; English (fluent), Mandarin (intermediate oral)

DESIGN PROJECTS

Ember — Stroke Rehabilitation Adherence Device, Independent Project, Ottawa, ON

May 2026 – Present

Expected completion: September 2026

- Advancing a home-based device that improves adherence to prescribed hand-rehabilitation exercises for stroke survivors — the reminder disarms only when the user completes their exercise routine — from problem definition to pre-prototype in under 3 months.
- Built an evidence-based design brief from 46 peer-reviewed sources spanning stroke rehabilitation, exercise science, and behavioural psychology, halting primary data collection in the absence of institutional ethics approval and treating patient-forum accounts as screened qualitative signal.
- Reduced alarm-fatigue risk for a vulnerable population by replacing audible alerts with a white-to-red ambient light escalation, mapping urgency against documented post-stroke anxiety sensitivities.
- Cut concept-review turnaround with a design partner by generating Vizcom renders from sketches, validating form and CMF direction ahead of clay modelling and 3D-printed CAD prototypes.
- Scoping the electronics component package and structuring public build documentation for open-source release on GitHub.

Helmet (1) — Brand-Language Study for Nothing, Carleton School of Industrial Design (Team of 5) March 2026 – April 2026

- Set the team's final design direction: personal concept selected over 5 refined candidates distilled from 100+ team-wide concepts as the strongest expression of Nothing's design language, applied to a half-helmet for urban e-scooter riders.
- Achieved embossing accuracy praised by faculty reviewers by reverse-engineering the brand's proprietary NDot typeface, modelling custom embossing dies in SolidWorks, and converging on a working tool in 3 FDM print iterations.
- Delivered a fully sculpted half-section model (mirror-displayed) in 2 weeks on roughly \$10 of purchased material, combining industrial design clay, thermoformed acrylic, and denim over a head bust with salvaged stock.
- Presented design rationale to 5 review groups and a 50+ person gallery audience, and produced the team's final product photography in Lightroom and Photoshop.

L1 Lamp — Sheet-Metal and Acrylic Lighting Product, Independent Project

May 2025 – August 2025

- Delivered a functional aluminum-and-acrylic luminaire in 1 month against a 4-month window and within a \$100 CAD budget, executing concept sketching, CAD, fabrication, branding, and documentation as sole contributor.
- Solved repeatable tight-radius bending of 1/4-inch sheet aluminum without a hydraulic press through 5 documented jig iterations, revising the fixture with 3D-printed dies, custom angle inserts, plate-steel reinforcement, and lubrication after each failure analysis.
- Eliminated cracking at small bend radii by torch-annealing stock before forming, validated through temperature and timing trials on scrap material.

- Produced manufacturing-ready documentation — complete BOM, Onshape sheet-metal technical drawings, and 3D-printed wall-mount and spacer hardware — with concept visualization in Blender.
- Generated ~9,000 views and 160 engagements across 3 posts from an account with under 50 followers through self-directed product photography and an original brand identity built in Illustrator.

OVIS — Custom Keyboard Concept, Carleton School of Industrial Design October 2025 – November 2025

- Identified an unaddressed segment of the custom mechanical keyboard market through documented competitive analysis and translated findings into final product requirements.
- Validated ergonomics, usability, and use cases by building 19 cardboard, plasticine, and foam sketch models and running 3 peer user-testing sessions.
- Produced 30+ 2D and 3D exploratory sketches to accelerate concept generation and constraint analysis.

iSoap 1 — Product and Packaging Design, Carleton School of Industrial Design March 2025 – April 2025

- Delivered a shelf-ready soap bar and packaging system meeting brand, volume, and manufacturing constraints by iterating sketch and physical prototypes until feasibility and brand alignment were satisfied.
- Resolved fitted-mould and embossing manufacturability challenges by testing draft, undercut, and detail-depth limits across prototype iterations, documenting outcomes on Illustrator presentation boards.

FUKUGOH — Skateboard Brand Identity System, Carleton School of Industrial Design November 2025 – December 2025

- Built a complete skateboard brand identity — logo system, colour, typography, and deck graphics — in 2 weeks on a \$0 budget in Illustrator, InDesign, and Photoshop, earning faculty commendation for execution quality at final review.
- Validated design direction against the target subculture through market research across skate and adjacent lifestyle brands and iterative feedback from skateboarding peers.

Personal Portfolio Website — In Progress 2026

- Developing a custom portfolio site in Next.js and React to replace template-based hosting, enabling full control over case-study presentation and project documentation.

EXPERIENCE

All Missions Well Done Ltd., Uxbridge, ON September 2020 – Present

Landscape Designer, Visualizer, and Operations Support (seasonal)

- Produced residential and commercial landscape designs for 30 client projects, converting site photos, sketches, and satellite data into AutoCAD plans, SketchUp models, material calculations, and AI-assisted concept renderings.
- Improved client and contractor alignment — reducing revision cycles during approval — by producing photorealistic 3D renders in SketchUp and Raylectron.
- Kept job sites on schedule for a 3–4 person crew by handling procurement runs, urgent same-day repair visits, worker transport, and skid-steer (Bobcat) operation.

Claw Me Baby, Toronto, ON June 2024 – August 2024

Floor Associate and Cashier

- Contributed to consistent 5-star customer reviews by assisting customers directly, resolving issues, and de-escalating conflicts calmly.
- Managed inventory counts and processed cash, credit, debit, and point-based transactions with zero reconciliation discrepancies.

LEADERSHIP AND INVOLVEMENT

Carleton Powerlifting Club (CUPL), Ottawa, ON — Media Executive May 2025 – Present

- Generated ~13,000 Instagram views across 5 posts and supported recruitment at 4 club fairs and 10+ club events by producing the club's marketing and media assets.

Autonomous Robotics Carleton (ARC), Ottawa, ON — Media Executive September 2025 – Present

- Illustrated promotional graphics and captured event videography supporting team branding; photographed a joint ARC and Systems and Computer Engineering Society event with 100+ attendees, delivering edited Lightroom photo sets.

OUTLINES Magazine, Ottawa, ON — Graphic Designer September 2025 – Present

- Produced editorial graphics to publication standards, translating prewritten content into layouts for published issues on deadline.

INDES Canada, Ottawa, ON — Event Photographer 2026

- Photographed Canada's first national industrial design conference and its student design competition (100+ attendees) at the organization's inaugural event, delivering edited photo sets for promotional use.

Carleton Industrial Design Students' Association (CIDSa) — Photographer (Incoming) September 2026

BioCARE, Carleton University — General Member (Incoming) September 2026

Vizcom Corkway Challenge — Entrant 2026

- Completed and submitted a full competition entry on a first-time platform; since integrated AI-assisted rendering into standing concept and CMF workflow.
